

**Amendments to the Specification**

Please replace the paragraph that begins at line 5 of page 20 with the following amended paragraph.

The detector/timer 110 measures the time difference between the end of a receive signal and the start of the subsequent transmit signal. If this time is less than a preprogrammed value, then the location information selector 106 ~~generator 108~~ is instructed to select the location information derived from the last received signal. If it is greater than the preprogrammed value, then it is instructed to select the default location information.
